

CORROSION PROTECTION MADE BY ZIMMERMANN

Coat Z – Coated brake discs

The aim of **Otto Zimmermann GmbH** is to offer OE-comparable brake discs concerning design, dimensional accuracy and material to the free spare parts market. This is standard for **Otto Zimmermann GmbH** since more than five decades now. With the coating "Coat Z", **Otto Zimmermann GmbH** follows the latest innovations of the automotive industry.

ZIMMERMANN COAT Z: The coated brake disc (left hand side in the picture) is still free of rust after several months of usage. The right hand side shows the same disc in unused condition.

To improve the rust protection during storage and usage, **Otto Zimmermann GmbH** implements this new technology step by step in its production range. Beside the still optimum function of the brake disc, this coating ensures a consistent attractive appearance.

Your advantages with Coat Z at a glance

- No formation of rust at the hub and outer diameter
- Considerably improved visual appearance
- Resistance to corrosion during storage and mounting
- Ready for mounting without removal of the coating
- Immediate functional capability

With the German certified production according to the newest industrial standard and with the coating "Coat Z", **Otto Zimmermann GmbH** underlines its leading position among the brake discs' manufacturers on the free spare parts market.
